

This file shows how to use layers with customized print/view properties. Text in light gray is placed in the background to specify the locations of invisible layers. You can access layers properties in the Layers panel of Adobe Acrobat. Note that the print version of the result PDF is different from the screen one.

layer1 - view:true; print:true

layer2 - view:false; print:true

layer3 - view:true; print:false

layer4 - view:false; print:false
